## INVESTMENT PROCESS

MASTER VOLATILITY est un fonds investi dans les produits de volatilité et les produits optionnels. L'objectif principal est de tirer profit de la surévaluation ou de la sous-évaluation de la volatilité implicite durant certaines phases de marché.

Le processus d'investissement est 100% quantitatif et mis en oeuvre de façon systématique.

La stratégie d'investissement cherche à tirer profit :

- Des écarts de valeurs entre volatilité implicite et volatilité historique
- Des écarts de prix entre les contrats futures sur volatilité et leur indice sous-jacent
- Des situations de contango et backwardation entre contrats futures de maturité différente

Le fonds investit principalement dans les produits sur indices :

- Options sur les grands indices américains et européens
- Options sur contrats futures VIX et sur ETN VIX
- Contrats à terme sur indice VIX
- Contrats à terme sur indices américains et européens
