QUANTIS DYNAMIC EQUITY is a quantitative Long/Short Equity Fund with an exposure on large US stocks. Its objective is to profit from the generally observed appreciation of stocks over a long period of time and to be protected in case of severe corrections of the stock markets.

Depending on market configurations, the fund may either enhance long positions, hedge the exposure by using short selling or equity futures, or even use short term oriented active trading techniques.

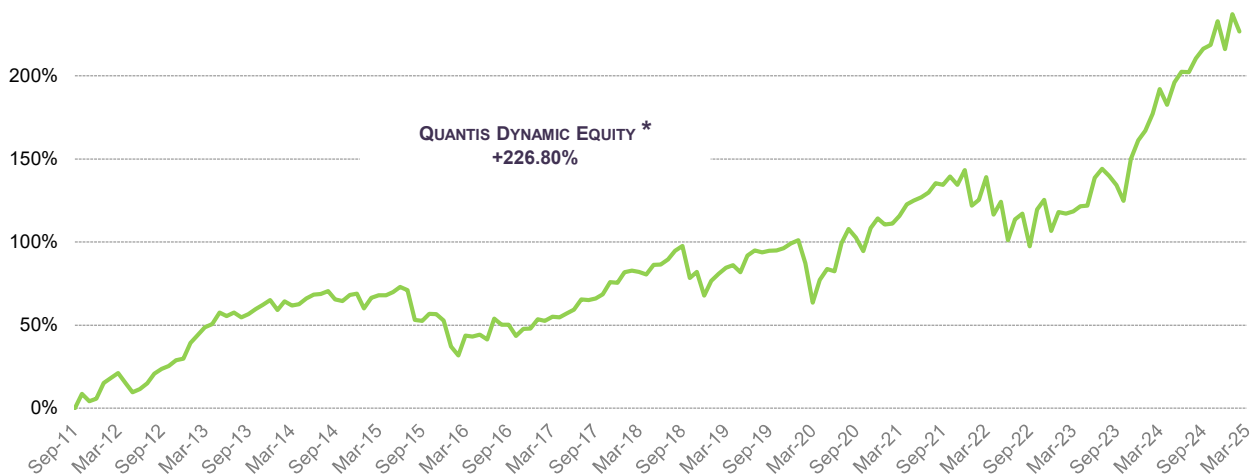

The fund was converted to a Luxembourg domiciled UCITS on March 23rd, 2015. From October 2011 to March 2015, QUANTIS DYNAMIC EQUITY was called PFM DYNAMIC EQUITY and was under Cayman jurisdiction.

INVESTMENT PROCESS

The investment process is fully modelised and implemented systematically. Trading models are supported by 3 strategies:

- The first one (40%) is focused on the selection of individual stocks which tend to outperform their benchmark on the long term. This selection model is based on seasonal behavior. Beside this pure quantitative model a manual screening is processed to avoid special situations where statistics do not apply. This strategy manages a portfolio of 20 stocks and is Long only.
 - The second one (40%) is a combination of technical indicators and seasonal behavior analyses which result in a more precise market timer : for any single stock this model indicates either a bullish, neutral or bearish middle term indication. This strategy manages a portfolio of 15 stocks and is Long/Short.
 - The third one (20%) tends to take advantage from the short term fluctuations of the stock markets (Overlay strategy). It should deliver its best performance in volatile market phases which generally appear during bear markets.
- Average leverage is below 1
 - Maximum leverage is always below 2

HISTORICAL PERFORMANCE (NET RETURN TO INVESTORS) (USD class)

* From October 2011 to March 2015 : PFM Dynamic Equity (Cayman). As of 23 March 2015 : Quantis Dynamic Equity (Luxembourg UCITS IV)
