INVESTMENT PROCESS

MASTER VOLATILITY is a fund invested in volatility products. The main objective is to take advantage of the overvaluation or undervaluation of the implied volatility during certain market phases.

The investment process is 100% quantitative and implemented systematically.

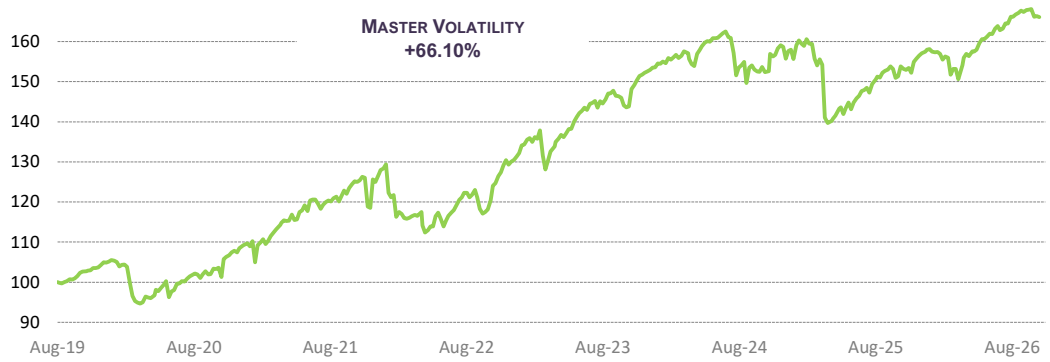

The investment strategy seeks to take advantage of:

- Differences in values between implied volatility and historical volatility
- Price differences between volatility futures contracts and their underlying index
- Contango and backwardation situations between futures contracts of different maturities

The fund mainly invests in index products:

- Options on major US and European indices
- Options on VIX futures contracts and on VIX ETNs
- VIX Index Futures
- US and European Index Futures
